Sound and Structural Vibration: Radiation, Transmission and Response

Frank J. Fahy, Paolo Gardonio

Sound and Structural Vibration: Radiation, Transmission and Response Frank J. Fahy, Paolo Gardonio

The first edition of Sound and Structural Vibration was written in the early 1980s. Since then, two major developments have taken place in the field of vibroacoustics. Powerful computational methods and procedures for the numerical analysis of structural vibration, acoustical fields and acoustical interactions between fluids and structures have been developed and these are now universally employed by researchers, consultants and industrial organisations. Advances in signal processing systems and algorithms, in transducers, and in structural materials and forms of construction, have facilitated the development of practical means of applying active and adaptive control systems to structures for the purposes of reducing or modifying structural vibration and the associated sound radiation and transmission.

In this greatly expanded and extensively revised edition, the authors have retained most of the analytically based material that forms the pedagogical content of the first edition, and have expanded it to present the theoretical foundations of modern numerical analysis. Application of the latter is illustrated by examples that have been chosen to complement the analytical approaches to solving fairly simple problems of sound radiation, transmission and fluid-structural coupling that are presented in the first edition. The number of examples of experimental data that relate to the theoretical content, and illustrate important features of vibroacoustic interaction, has been augmented by the inclusion of a selection from the vast amount of material published during the past twenty five years. The final chapter on the active control of sound and vibration has no precursor in the first edition.

- * Covers theoretical approaches to modeling and analysis
- * Highly applicable to challenges in industry and academia
- * For engineering students to use throughout their career

From reader reviews:

Louis Jackson:

Do you really one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Make an effort to pick one book that you find out the inside because don't ascertain book by its include may doesn't work the following is difficult job because you are afraid that the inside maybe not because fantastic as in the outside search likes. Maybe you answer might be Sound and Structural Vibration: Radiation, Transmission and Response why because the wonderful cover that make you consider regarding the content will not disappoint an individual. The inside or content is usually fantastic as the outside or even cover. Your reading sixth sense will directly assist you to pick up this book.

Mildred Smith:

Reading a book to get new life style in this yr; every people loves to study a book. When you study a book you can get a lot of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information into it. The information that you will get depend on what kinds of book that you have read. If you wish to get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, this sort of us novel, comics, and soon. The Sound and Structural Vibration: Radiation, Transmission and Response offer you a new experience in examining a book.

Gregory Jones:

Is it you actually who having spare time and then spend it whole day through watching television programs or just resting on the bed? Do you need something new? This Sound and Structural Vibration: Radiation, Transmission and Response can be the respond to, oh how comes? A book you know. You are consequently out of date, spending your time by reading in this fresh era is common not a geek activity. So what these books have than the others?

Dorothy Bernstein:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information coming from a book. Book is prepared or printed or created from each source that will filled update of news. With this modern era like at this point, many ways to get information are available for an individual. From media social like newspaper, magazines, science guide, encyclopedia, reference book, book and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just in search of the Sound and Structural Vibration: Radiation, Transmission and Response when you desired it?
