Bioinformatics: A Practical Approach (Chapman & Hall/CRC Mathematical and Computational Biology) Shui Qing Ye, Shui Qing

An emerging, ever-evolving branch of science, bioinformatics has paved the way for the explosive growth in the distribution of biological information to a variety of biological databases, including the National Center for Biotechnology Information. For growth to continue in this field, biologists must obtain basic computer skills while computer specialists must possess a fundamental understanding of biological problems. Bridging the gap between biology and computer science, **Bioinformatics: A Practical Approach** assimilates current bioinformatics knowledge and tools relevant to the omics age into one cohesive, concise, and self-contained volume.

Written by expert contributors from around the world, this practical book presents the most state-of-the-art bioinformatics applications. The first part focuses on genome analysis, common DNA analysis tools, phylogenetics analysis, and SNP and haplotype analysis. After chapters on microarray, SAGE, regulation of gene expression, miRNA, and siRNA, the book presents widely applied programs and tools in proteome analysis, protein sequences, protein functions, and functional annotation of proteins in murine models. The last part introduces the programming languages used in biology, website and database design, and the interchange of data between Microsoft Excel and Access.

Keeping complex mathematical deductions and jargon to a minimum, this accessible book offers both the theoretical underpinnings and practical applications of bioinformatics.

From reader reviews:

Janette Collins:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to learn everything in the world. Each reserve has different aim or maybe goal; it means that reserve has different type. Some people experience enjoy to spend their time for you to read a book. They are really reading whatever they acquire because their hobby will be reading a book. What about the person who don't like reading a book? Sometime, particular person feel need book once they found difficult problem or even exercise. Well, probably you will want this Bioinformatics: A Practical Approach (Chapman & Hall/CRC Mathematical and Computational Biology).

Roger Lindsey:

Reading a reserve can be one of a lot of action that everyone in the world likes. Do you like reading book therefore. There are a lot of reasons why people love it. First reading a reserve will give you a lot of new info. When you read a publication you will get new information due to the fact book is one of numerous ways to share the information or even their idea. Second, reading through a book will make anyone more imaginative. When you examining a book especially hype book the author will bring you to imagine the story how the characters do it anything. Third, it is possible to share your knowledge to others. When you read this Bioinformatics: A Practical Approach (Chapman & Hall/CRC Mathematical and Computational Biology), you can tells your family, friends in addition to soon about yours e-book. Your knowledge can inspire the mediocre, make them reading a book.

William Kelley:

Playing with family in a very park, coming to see the sea world or hanging out with pals is thing that usually you have done when you have spare time, after that why you don't try point that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love Bioinformatics: A Practical Approach (Chapman & Hall/CRC Mathematical and Computational Biology), you may enjoy both. It is great combination right, you still desire to miss it? What kind of hangout type is it? Oh occur its mind hangout guys. What? Still don't buy it, oh come on its identified as reading friends.

Alexander Pridmore:

Reading a reserve make you to get more knowledge from it. You can take knowledge and information from a book. Book is composed or printed or illustrated from each source that filled update of news. In this particular modern era like currently, many ways to get information are available for you. From media social such as newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the Bioinformatics: A Practical Approach (Chapman & Hall/CRC Mathematical and

Computational Biology) when you necessary it?
