Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing)

Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing)

This volume brings together works resulting from research carried out by members of the EURO Working Group on Transportation (EWGT) and presented during meetings and workshops organized by the Group under the patronage of the Association of European Operational Research Societies in 2012 and 2013.

The main targets of the EWGT include providing a forum to share research information and experience, encouraging joint research and the development of both theoretical methods and applications, and promoting cooperation among the many institutions and organizations which are leaders at national level in the field of transportation and logistics.

The primary fields of interest concern operational research methods, mathematical models and computation algorithms, to solve and sustain solutions to problems mainly faced by public administrations, city authorities, public transport companies, service providers and logistic operators. Related areas of interest are: land use and transportation planning, traffic control and simulation models, traffic network equilibrium models, public transport planning and management, applications of combinatorial optimization, vehicle routing and scheduling, intelligent transport systems, logistics and freight transport, environment problems, transport safety, and impact evaluation methods.

In this volume, attention focuses on the following topics of interest:

- Decision-making and decision support
- Energy and Environmental Impacts
- Urban network design
- Optimization and simulation
- Traffic Modelling, Control and Network Traffic Management
- Transportation Planning
- Mobility, Accessibility and Travel Behavior
- Vehicle Routing

From reader reviews:

Ricardo Hamilton:

This Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is usually information inside this guide incredible fresh, you will get data which is getting deeper an individual read a lot of information you will get. This particular Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) without we know teach the one who looking at it become critical in pondering and analyzing. Don't possibly be worry Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) can bring any time you are and not make your bag space or bookshelves' become full because you can have it in the lovely laptop even cell phone. This Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) having great arrangement in word along with layout, so you will not really feel uninterested in reading.

Mindy Marcotte:

Typically the book Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) has a lot of knowledge on it. So when you make sure to read this book you can get a lot of gain. The book was authored by the very famous author. Tom makes some research ahead of write this book. This kind of book very easy to read you can obtain the point easily after reading this book.

Jeremy Richards:

Reading can called head hangout, why? Because if you find yourself reading a book particularly book entitled Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) your head will drift away trough every dimension, wandering in most aspect that maybe unfamiliar for but surely will become your mind friends. Imaging just about every word written in a e-book then become one type conclusion and explanation that will maybe you never get previous to. The Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) giving you another experience more than blown away your mind but also giving you useful information for your better life within this era. So now let us demonstrate the relaxing pattern at this point is your body and mind will be pleased when you are finished examining it, like winning a casino game. Do you want to try this extraordinary paying spare time activity?

Jeanne Newman:

Are you kind of busy person, only have 10 or even 15 minute in your day time to upgrading your mind talent or thinking skill actually analytical thinking? Then you are having problem with the book compared to can satisfy your short time to read it because pretty much everything time you only find publication that need

more time to be examine. Computer-based Modelling and Optimization in Transportation: 262 (Advances in Intelligent Systems and Computing) can be your answer given it can be read by anyone who have those short free time problems.
