The development of high-order accurate numerical discretization techniques for irregular domains and meshes is often cited as one of the remaining chal lenges facing the field of computational fluid dynamics. In structural me chanics, the advantages of high-order finite element approximation are widely recognized. This is especially true when high-order element approximation is combined with element refinement (h-p refinement). In computational fluid dynamics, high-order discretization methods are infrequently used in the com putation of compressible fluid flow. The hyperbolic nature of the governing equations and the presence of solution discontinuities makes high-order ac curacy difficult to achieve. Consequently, second-order accurate methods are still predominately used in industrial applications even though evidence sug gests that high-order methods may offer a way to significantly improve the resolution and accuracy for these calculations. To address this important topic, a special course was jointly organized by the Applied Vehicle Technology Panel of NATO's Research and Technology Organization (RTO), the von Karman Institute for Fluid Dynamics, and the Numerical Aerospace Simulation Division at the NASA Ames Research Cen ter. The NATO RTO sponsored course entitled "Higher Order Discretization Methods in Computational Fluid Dynamics" was held September 14-18,1998 at the von Karman Institute for Fluid Dynamics in Belgium and September 21-25,1998 at the NASA Ames Research Center in the United States.

You never really feel lose out for everything if you read some books.

Wilma Blue:

In this 21st one hundred year, people become competitive in each way. By being competitive today, people have do something to make all of them survives, being in the middle of often the crowded place and notice through surrounding. One thing that sometimes many people have underestimated this for a while is reading. Sure, by reading a publication your ability to survive raise then having chance to endure than other is high. For you personally who want to start reading the book, we give you that High-Order Methods for Computational Physics (Lecture Notes in Computational Science and Engineering) book as starter and daily reading guide. Why, because this book is more than just a book.

Becky Pope:

Nowadays reading books are more than want or need but also turn into a life style. This reading habit give you lot of advantages. The huge benefits you got of course the knowledge the particular information inside the book in which improve your knowledge and information. The information you get based on what kind of reserve you read, if you want get more knowledge just go with education and learning books but if you want feel happy read one along with theme for entertaining such as comic or novel. The High-Order Methods for Computational Physics (Lecture Notes in Computational Science and Engineering) is kind of book which is giving the reader unstable experience.

Joseph Herbst:
